Arc-funded software goes to waste
Australian researchers produced a great deal of original software as part of Australian Research Council funded grants, but it is hard to find – let alone know to use it for other projects.

Eva Maxfield Brown and Nic Weber used machine learning tools to estimate that 47% of ARC funded projects 2010-2019 created software infrastructure, tools or "code of some kind".

Creation is not solely in STEM – 34% of economics, 24% of humanities and 15% of education projects used original software. However the big users, grouped by ARC research evaluation, are in the hard sciences: "technology" 72%, maths 66% and physical, chemical and earth sciences, 58%.

So, what is to be done?
